- General Ledger
- Inventory Management
- Purchase Order
- Sales Order

Developer Modules in Operation

- Fusion Retail Point of Sale by Mik & Associates

Summerhays Music Strikes Up the Band with MAS 500

If your son or daughter joins the school band and you live in Utah, chances are you'll head straight to Summerhays Music for a rent-to-own instrument. The family-run business began in 1936 and now rents almost 7,000 instruments a year from its three stores and associate dealers throughout the Rocky Mountain states. They also sell a complete line of instruments and supplies, from clarinet reeds, sheet music and guitars to handmade Bosendorfer pianos priced at \$100,000.

Systems Out of Tune

Given the nature of its business, Summerhays Music Center is as much a finance company as a music store. Thousands of customers make payments on instruments every month, creating a bookkeeping nightmare. Speedy, efficient processing is a must.

"We're committed to being the leader in quality, service and price, period," says Scott Summerhays, president. "We realized about ten years ago that the only way to do this as an independent player was through

technology. So we formulated a long-term plan to achieve our quality goals — and hold our own against the big chains."

Early efforts involved three stand-alone systems: one each for rentals, general ledger and point of sale. "We suffered because of a lack of integration," says Summerhays, "and began working on an end-to-end system built on SQL architecture."

A Symphony of Efficiency

After a three-year search, Summerhays found what it needed in MAS 500. Being written in Visual Basic and utilizing an SQL

CHALLENGE

Replace disharmonious systems with a robust, end-to-end financial system that provides seamless integration with retail modules, enhances efficiency and accommodates growth.

SOLUTION

MAS 500 financial, distribution and FAS Asset Accounting modules in conjunction with Fusion Point of Sale.

RESULTS

Streamlined automation from a to z; Seamless integration; Paperless office; Instant analysis and easy reporting; Accurate depreciation; Credit approvals in less than a minute, instead of hours; \$50,000+ annual savings.

“MAS 500 is more than just an incredibly good general ledger package. It’s the engine that serves as the foundation for our entire system.”

database, MAS 500 permits seamless integration with other key components: Fusion Retail Solution, a point-of-sale module from Mik and Associates, and a custom rental module written inhouse.

Summerhays’ new system is surprisingly sophisticated. When a customer rents an instrument, Fusion generates a paperless contract, as well as a hard copy on the laser printer. The customer reads the terms and conditions of the contract, then signs in a digital signature box like those used in larger department and electronics stores. When the customer leaves with their paper version, Summerhays maintains a cybercontract. The entire rental process can be completed in about five minutes.

“Before we had to create paper files, maintain them, and find somewhere to store them,” says Summerhays. “Each time there was a payment, pay-off or return, we had to retrieve documents. But now all that’s gone. The paperless office is saving us at least \$50,000 a year.”

Another nifty feature is automatic credit approval. While a salesperson serves a customer, the new system pulls a credit report and evaluates it behind the scenes. Credit checks that previously took hours can now be done in less than a minute.

After credit approval, sales information is recorded, including down payment, accessory sales and close-out data. Items

are relieved from inventory, payables and receivables are automatically updated, and information is available for easy analysis and reporting.

The system also includes the FAS Asset Accounting module to depreciate fixed assets like buildings, fixtures, furniture and office equipment. FAS Asset Accounting maintains complex depreciation calculations and journal entries.

The next phase in Summerhays’ vision is expanding the system to associate dealers in small towns throughout the region. By providing them with computer links over the Internet, associates will have the same access to rental and business data as stores in the Greater Salt Lake area. This will permit many of the benefits of e-commerce without losing the human touch that’s so essential in the music business.

Summerhays says he now has the technology to handle future growth and make improvements in customer relationship management and database marketing. “MAS 500 is more than just an incredibly good general ledger package,” he comments. “In our case, it’s the engine that serves as the foundation for our entire system. There’s no way we could be where we are today without it.”
